Sequence 10, Application US/09644600
Patent No. 6451500
GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: O'Brien, Timothy J.
APPLICANT: Tanimoto, Hirotoshi
TITLE OF INVENTION: TADG-15: An Extracellular Serine Pro
TITLE OF INVENTION: Overexpressed in Carcinomas
FILE REFERENCE: D6064CIP/D
CURRENT APPLICATION NUMBER: US/09/644,600
CURRENT FILING DATE: 2000-08-23
PRIOR APPLICATION NUMBER: 09/421,213
PRIOR APPLICATION NUMBER: 09/421,213
PRIOR APPLICATION NUMBER: 09/027,337
PRIOR FILING DATE: 1999-10-20
PRIOR APPLICATION NUMBER: 09/027,337
PRIOR FILING DATE: 1998-02-20
NUMBER OF SEQ ID NOS: 98
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              á

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes secreted and transmembrane polypeptides and their polynuclectides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AZ33891 to AAZ34338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

         AAC78458 to AAC78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo sapiens

The Ab can be used in compositions and methods for the diagnosis and treatment of neoplastic cell growth and preliferation in mammals, including humans. Genes and polypeptides encoded by them, that are amplified in the genome of a tumour cell, can be identified and are useful targets for the treatment and prevention of certain cancers and may be used to monitor tumour treatment. Compounds that inhibit the expression or activity of the identified polypeptides can be'identified and used as antagonists. Benign or malignant tumours, inflammatory disorders and immunological disorders can be treated.

AAC58123 to AAC58224 represent human PRO sequences. AAC58241 and AAB24041 to AAB24056 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-MAR-1999

The PRO polypeptides are secreted and transmembrane proteins. The PRO CC polypeptides are useful for detecting other PRO polypeptides, for illnking bioactive molecules to cells expressing PRO polypeptides, for CC for modulating biological activities of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The CC polypeptides, and for for identifying agonists or antagonists. The CC polypeptides are useful for treating immune disorders, diabetes or hyper- or hypo-insulinaemia, CC treating immune disorders, diabetes or hyper- or hypo-insulinaemia, CC cardiac insufficiency, nervous system disorders, kidney disorders, and cartilage disorders or arthritis, tumours, and wound healing. CC The polypucleotide sequences encoding PRO polypeptides are useful as CC hybridisation probes, in chromosome and gene mapping, in the generation CC of antisense RNA and DNA, in the preparation of PRO polypeptides, for CC analysis of individuals with genetic disorders, and in gene therapy. CC ABU61071-ABU61164 represent the human PRO polypeptides of the

CC The present invention relates to the isolation of novel human CC proteases, and the nucleic acids encoding them. The sequences of CC the invention are useful for treating diseases and disorders such as CC cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and coronary thrombosis), brain or neuronal-associated CC diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory CC disorders (e.g. rheumatoid arthritis and psoriasis), central or CC peripheral nervous system diseases, migraines, pain, sexual dysfunction, CC mood disorders, attention disorders, pain, sexual dysfunction, CC mypertension, psychotic disorders, cognition disorders hypotension, CC hypertension, psychotic disorders, neurological disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias.

CC The nucleic acids and polypeptides are also useful for treating viral CC infections such as ocular disease (e.g. glaucoma) and macular accounts of the company of the comp

The present sequence is the protein sequence of novel human type II transmembrane serine protease 20 (MTSP20), an endothelial cell transmembrane protein (endotheliase) that is expressed in oesophageal tumour tissues, in lung carcinoma, colon, cervix, leukaemia and other cell lines as well as in certain healthy cells and tissues. The level of MTSP20 can be diagnostic of prostate, uterine, lung, cesophagus or colon cancer, or leukaemia. The expression and/or activation of MTSP20 on, or in the vicinity of, a cell or a bodily fluid can be a marker for breast, prostate, lung, colon and

granuloma and systemic sclerosis), aberrant wound repairs,
circulatory disorders (especially Raynaud's phenomenon), crest
syndromes (especially calcinosis, oesophageal, dyomotiloty,
sclerodactyly and telangiectasis), dermatological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the protein sequence of novel human type

II transmembrane serine protease 20 (MTSP20), an endothelial cell

transmembrane protein (endotheliase) that is expressed in oesophageal

tumour tissues, in lung carcinoma, colon, cervix, leukaemia and other

cell lines as well as in certain healthy cells and tissues. The

level of MTSP20 can be diagnostic of prostate, uterine, lung,

cesophagus or colon cancer, or leukaemia. The expression and/or

activation of MTSP20 on, or in the vicinity of, a cell or a

bodily fluid can be a marker for breast, prostate, lung, colon and

other cancers. The invention provides MTSP20 polypeptides and

chain forms, the nucleic acids encoding them, probes and primers,

expression vectors, host cells, antibodies and transgenic animals.

Nucleic acids encoding MTSP20 or its procease domain can be identificated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

A claimed method of inhibiting tumour initiation, growth or progression or for treating a malignant or pre-malignant condition, especially of the breast, cervix, prostate, lung, ovary or colon, involves administering an inhibitor of a MTSP20 polypeptide, especially an antisense oligonucleotide, double-stranded RNA or antibody (all claimed). These inhibitors are also used in a claimed method of treating or preventing a disease or disorder associated with undesired and/or uncontrolled anglogenesis or neovascularisation, especially undesired anglogenesis associated with solid neoplasms,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diabetic retinopathy, myopic degeneration, retinopathy of prematurity, retrolental ribroplasia and corneal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
The present invention relates to human trypsin designated m32404 proteins and polynucleotides encoding such proteins. m32404 sequences are useful in the prevention, diagnosis and treatment of diseases associated with inappropriate m32404 trypsin expression. They are used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of m32404 trypsin by expressing inactive proteins or to supplement the patients own production of m32404 trypsin. They are also used to prevent, diagnose and/or treat bone disorders (e.g. osteoporosis, osteopenia, tropical sprue), immune disorders (e.g. psoriasis, asthma, allergies), cellular proliferative disorders (e.g. carcinoma, sarcoma and leukaemias), haematopoietic
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding human trypsin m32404, useful for preventing diagnosing and treating e.g. bone disorders, cellular proliferative disorders and immune disorders -
